

Snow Leopards of Central Asia

By Christopher J. Hanson

4/17/2013

Period 3

Mr. Hanson's 7th Grade Science Class

I have appreciated the uniqueness of snow leopards since I first learned about them in my 8th grade science class. I was 13 years old and my science teacher recommended that I look for resources in our school and town library for information about the animal. Since, there were no computers available when I was young, the only option was either books or the National Geographic Magazine, which we received a copy every month. The library also had a subscription and had back copies on the shelf. After much digging, I was able to find a National Geographic article and a reference in the encyclopedia on snow leopards. Snow leopards are fascinating animals, and the focus of my research.

Next Paragraph topic sentence:

Scientists have defined snow leopards.

Next Paragraph topic sentence:

Snow Leopards are found in the mountainous areas of Central Asia.

At the end of your paper you will need to write a conclusion paragraph. This is a summary of what you learned in the body of your paper, in which you will restate your main topic.
